

Marketing Strategy Document

PT. Solid Gold Berjangka (SGB)

A comprehensive strategy covering Ideal Customer Profile, positioning, messaging, channel prioritization, and a 30-day execution roadmap for Indonesia's regulated futures market.

2024 STRATEGY

BAPPEBTI-LICENSED BROKER

JFX MEMBER

Ideal Customer Profile (ICP)

SGB's marketing targets two distinct segments: active retail traders seeking regulated gold and index derivatives access, and institutional or corporate hedgers requiring commodity price risk protection. Understanding each segment's profile, motivations, and behavior is essential for crafting resonant messaging and selecting the right channels.

Primary Segment — Active Retail Trader

- Age 25–45, male-skewing, based in Jakarta, Semarang, or Makassar
- Has existing experience with stocks, crypto, or forex; ready to diversify
- Motivated by gold as a hedge and index derivatives for speculation
- Comfortable with online account opening and digital trading platforms
- Follows financial news; responds to market volatility triggers

This segment is digitally native, financially literate, and actively seeking regulated alternatives to offshore or unlicensed platforms. They value credibility, product range, and ease of onboarding.

Secondary Segment — Institutional/Corporate Hedger

- SMEs or commodity businesses seeking price risk protection via olein or gold futures
- Finance managers familiar with BAPPEBTI-regulated instruments
- Prioritizes regulatory credibility and clearing house membership

This segment requires a more consultative approach. Messaging should emphasize SGB's 20+ year track record, JFX & KBI membership, and the ability to execute hedging strategies in a fully regulated environment. LinkedIn and direct outreach are the most appropriate channels for this audience.

Both segments share a core need: **trust in a regulated, experienced broker** with the product depth to meet their trading or hedging objectives.

Positioning Statement

For Indonesian retail traders and commodity businesses **who** want regulated access to gold, olein, and global index derivatives, **SGB is** a trusted, 20+ year licensed futures broker **that** combines BAPPEBTI oversight, JFX membership, and a full suite of multilateral and bilateral products — **unlike** newer or offshore competitors, SGB offers proven local credibility with institutional-grade instruments accessible to individual traders.

Target Audience

Indonesian retail traders and commodity businesses seeking regulated derivatives access

SGB's Identity

A trusted, 20+ year licensed futures broker with BAPPEBTI oversight and JFX membership

Key Differentiator

Full suite of multilateral and bilateral products — institutional-grade instruments accessible to individuals

Competitive Edge

Proven local credibility versus newer or offshore competitors lacking regulatory standing

This positioning anchors all messaging, creative, and channel decisions. Every touchpoint should reinforce SGB's regulatory credibility, product breadth, and accessibility to both retail and institutional clients.

Messaging Framework

SGB's messaging is built on a clear hierarchy: a core promise supported by three proof points and anchored by an emotional hook. The tone is professional but approachable – authoritative without being intimidating – and delivered in Indonesian-first language to resonate with the target audience.

Layer	Message
Core Promise	Trade with confidence – regulated, experienced, and fully equipped
Proof Point 1	Licensed since 2002, supervised by BAPPEBTI, member of JFX & KBI
Proof Point 2	Full product range: gold futures, olein, Hang Seng, Nikkei 225
Proof Point 3	Start risk-free with a demo account; go live with a simple online registration
Emotional Hook	<i>"Protect your wealth and grow it – on your terms"</i>

Tone Guidelines

All communications – from ad copy to social posts to email – should maintain a **professional but approachable** voice. SGB is an authority in the Indonesian futures market, but the messaging should never feel cold or inaccessible. Use Indonesian-first language to ensure cultural relevance and trust with the primary audience.

Applying the Framework

- Lead with the core promise in all top-of-funnel content
- Deploy proof points in mid-funnel education and comparison pages
- Use the emotional hook in creative assets and social content
- Ensure demo account CTA is prominent across all digital touchpoints

Channel Prioritization Report

Channels are ranked by expected impact on account registrations, alignment with target audience behavior, and cost-effectiveness. The top four channels should receive the majority of budget and effort in the first 30 days.

Rank	Channel	Rationale
1	Google Search Ads (SEM)	High-intent traders actively search "broker berjangka terpercaya," "trading emas futures." Fastest path to account registrations.
2	SEO / Content Marketing	News, analysis, and education pages already exist on-site. Optimizing these captures organic traffic from market-curious users at zero marginal cost.
3	Instagram & YouTube	Visual demos of the trading platform, market explainers, and trader testimonials build trust with the 25–40 demographic. YouTube suits longer education content.
4	WhatsApp / Telegram Community	Indonesian traders heavily use messaging apps. A moderated market-signal channel drives daily engagement and nurtures leads toward registration.
5	Referral / IB Program	Introducing Broker networks are standard in Indonesian futures. Activating or expanding this channel leverages existing trader communities at low cost.
6	LinkedIn (B2B)	Targets institutional and corporate hedger segment. Lower volume but higher account value. Suitable for olein and hedging product messaging.

Deprioritize for now: TikTok (compliance risk with financial content), print/OOH (poor measurability), and broad display ads (low conversion for financial products).

30-Day Roadmap

The first 30 days focus on building a strong digital foundation, launching content and community channels, and establishing a measurable conversion funnel. Each week builds on the previous, moving from quick wins to optimization and scale.

1

Week 1 — Foundation & Quick Wins

- Audit website SEO: fix meta titles, add keyword-rich descriptions to product pages (GOL, OLE, XUL10)
- Set up Google Search Ads campaign targeting 5–8 high-intent keywords (e.g., "broker emas jangka," "trading indeks luar negeri")
- Create a WhatsApp broadcast list and Telegram channel; seed with daily live quote updates
- Define conversion tracking: install Google Analytics goals on the registration CTA

2

Week 2 — Content Engine Launch

- Publish 2 SEO blog posts: (1) "Apa itu Kontrak Berjangka Emas?" (2) "Perbedaan Akun Demo dan Live di SGB"
- Record a 60-second Instagram Reel: platform walkthrough + demo account CTA
- Launch a simple lead magnet (PDF: "Panduan Memulai Trading Berjangka") gated behind email capture
- Brief internal team on consistent brand tone across all channels

3

Week 3 — Community & Referral Activation

- Post daily market commentary on Telegram/WhatsApp (gold price, index movement) to build habit
- Reach out to 3–5 active Introducing Brokers; offer updated marketing materials and commission clarity
- Publish 1 YouTube video: "Demo Trading Platform SGB — Step by Step"
- Run a small retargeting ad on Instagram targeting website visitors who did not register

4

Week 4 — Optimize & Scale

- Review SEM campaign: pause underperforming keywords, increase budget on top converters
- Analyze registration funnel drop-off points; simplify or add support touchpoints (live chat, WhatsApp button)
- Publish Week 4 content: market outlook post + 1 educational piece on Loco London Gold
- Compile 30-day report: registrations, cost per lead, top traffic sources — use to set Month 2 budget

Day 30 Success Metrics

By the end of the 30-day sprint, SGB should have clear, measurable evidence that the marketing foundation is working. These three success criteria will determine whether to scale spend, adjust strategy, or double down on specific channels heading into Month 2.

200+

Community Subscribers

An active WhatsApp/Telegram community channel with 200+ subscribers engaged with daily market commentary and live quotes

2

Page-1 Rankings

At least 2 content assets ranking on page 1 of Google for target keywords, driving organic traffic at zero marginal cost

↑

Registration Growth

Measurable increase in online account registrations versus the 30-day baseline, tracked via Google Analytics goals

What Success Looks Like

Hitting all three targets confirms that SGB's channel mix, messaging, and content strategy are resonating with the target audience. This validates increased budget allocation in Month 2, particularly for SEM and community-driven referral programs.

If Targets Are Missed

- Diagnose funnel drop-off: is the issue traffic quality, landing page experience, or onboarding friction?
- Reassess keyword targeting and ad copy for SEM underperformers
- Review content topics and formats – are they addressing the right search intent?
- Consider accelerating IB/referral outreach to boost registrations through existing trader networks

Key principle: The 30-day report is not just a performance review – it is the data foundation for setting Month 2 budget, channel priorities, and content strategy with confidence.
